

FACT SHEET for: What Is The Best Fertiliser For Your Lawn

- 1) Giddy it's the lawn expert
- 2) What is the best fertilizer for your Lawn whether you are a homeowner or contractor
- 3) We have visited Bunnings (located in Dural) and then Flower Power (also in Dural) to see the range of lawn care fertiliser products on offer.
- 4) Here in Australia, we have 4 fairly well defined seasons Summer Autumn Winter and Spring.
- 5) Generally for established lawns we need to fertilise every 3 months.
- 6) For ESTABLISHED lawns we want a fertilizer with an NPK with a nitrogen (N) of between around 30 to 20, phosphorous (P) of around 0 and potassium (K) of around between 10 and 5. This will read like this – 30:0:5 or maybe 20:0:5
- 7) Generally Australian soils already have phosphorous present enough for established grasses, therefore, the phosphorous content in fertilizer products for established lawns is zero or very low.
- 8) For NEWLY LAID Turf or Sod, we want a starter fertilizer with an NPK of low nitrogen around 10 or under, a bit of phosphorus of around 5 and higher potassium of around 15 to 20. This will read like this – 10:5:15
- 9) There is more phosphorous in starter fertilizers as new turf or sod needs help with root development.
- 10) Hope this helps.
- 11) In return and as a favour to me, please **SUBSCRIBE** to our Youtube channel at <https://www.youtube.com/user/yourlawnandgarden> and please **SHARE** our video to your friends on Facebook, LinkedIn and Pinterest. **Also, please give us the THUMBS up and LIKE our video!!!**
