

FACT SHEET for: Surfactant

- 1) Giddy it's the lawn expert
- 2) You will notice when you spray the weeds that the liquid forms rolling balls of moisture and that not all of the target weeds are covered in the herbicide. This can be prevented by using a surfactant added to the herbicide and water mixture.
- 3) What is a surfactant? A surfactant is a substance which tends to reduce the surface tension of a liquid in which it is dissolved.
- 4) In our weed & feed Lawn Care business we use a surfactant product called Maxwet.
- 5) The label for Maxwet can be viewed at <http://www.globegrowingsolutions.com.au/products/labels/MAXWET%20LABEL3.pdf>
- 7) Hope this helps.
- 8) In return and as a favour to me, please **SUBSCRIBE** to our Youtube channel at <https://www.youtube.com/user/yourlawnandgarden> and please **SHARE** our video to your friends on Facebook, LinkedIn and Pinterest. **Also, please give us the THUMBS up and LIKE our video!!!**
